Kickstarter inspired web app built with React, Ruby on Rails, and JavaScript

- Leveraged React lifecycle methods to dynamically generate new content on the front page without sacrificing performance.
- Employed CSS3 flexbox and grid, as well as light borders, to imitate Kickstarter's minimal design.
- Utilized AWS to store data from user uploads.
- Backend was built with Rails and implemented Jbuilder to properly format data for frontend.

JSBeatDown | 2019 | Github

JavaScript browser game

- Rendered sprites using a combination of html canvas and vanilla JavaScript.
- Utilized object oriented programming to organize distinct concerns into classes that store their own state.
